

Drainageway, Openspace and Greenways Map - August 2011

Flood Hazard Map is a GIS shapefile representing the area within the flood mapping boundaries defined by the engineering models for the 100 year, 500 year and floodway. The MapFidHavZ spatial table contains information about the flood hazard within the study area. These zones are used by FEMA to designate the Special Flood Hazard Area (SFHA) identify areas of coastal high hazard flooding, and for insurance rating purposes. These data are the flood hazard areas that are or will be depicted on the FIRM.

These data were collected and derived by the North Carolina Floodplain Mapping Program (www.ncfloodmaps.com) as part of its effort to modernize FEMA Flood Insurance Rate Maps (FIRM) statewide. The North Carolina Floodplain Mapping Program was established through a Cooperative Technical State (CTS) agreement with FEMA in response to the extensive damage caused by Hurricane Floyd in 1999.

These data and map sets have been created from information provided by various government and private sources at different moments in time and at various levels of accuracy. They are only a graphic representation and should not be considered as positionally accurate. The data is provided to you "as is" with no claim made as to its accuracy or its appropriateness to your intended use of the data. It is the responsibility of the user of the data to be aware of its limitations and to utilize the data in an appropriate manner. Therefore under no circumstances shall the City of Greensboro or its representatives be held responsible for any costs, expenses, damages or injuries, including special or incidental or consequential damages to any person(s) or property that arises from the use of the information provided.
